2000–2006 Tundra
Modular Accessory Mount

Installation Guide · Fits 2000-2006 Toyota Tundra

What's in the kit

- ✓ Modular Accessory Mount
- ✓ Self-tapping screws
- ✓ Optional Walkie Talkie mount, if you purchased it, with nuts and bolts

Fitment

Fits 2000-2006 Toyota Tundra. The mount goes over the center console bezel, set as high as it will go. Use the photos as a reference.

Safety first

- ! Park on level ground, set the parking brake and **turn the vehicle off** before you start.
- ! **Do not overtighten the screws.** Overtightening will make the mount loose. Finish tightening by hand, and stop once the screws are snug. Do not keep spinning them after they are tight.
- ! If you're not comfortable working on interior trim, have a qualified installer do the job.

Tools & parts

- The kit includes self-tapping screws. Finish tightening by hand.
- If you purchased the optional Walkie Talkie mount, it uses the provided nuts and bolts.

INSTALL Install the mount

1 Line up the mount

Align the mount over the center console bezel and make sure it is as high as it will go. Use the photos as a reference.

2 Install screws, alternating sides

Make sure the mount looks straight and install one screw on one side. Check that it is still straight, then install one on the opposite side. Check the position again and adjust if needed. Keep alternating sides until the mount is fully installed.

3 Finish, and add the optional Walkie Talkie mount

Once the screws are tight, you're done. If you purchased the optional Walkie Talkie mount, install it on the right side of the mount using the provided nuts and bolts.

FIX Troubleshooting

If this happens	Try this
The mount feels loose after install	Overtightening the screws can make the mount loose. Do not keep spinning the screws after they are tight. Finish tightening by hand.
The mount is not straight	Hold the mount firmly in place, check that it looks straight, and start with one screw on each side (or the first screws called out in the steps) before you add the rest.
